Work Experience

- **Shell India Markets Pvt Ltd.** Bengaluru, Onsite
  Software Engineer *August 2023 - Present*
  - Developed secured **RESTful APIs** for PnL adjustment submission and retrieval in FRAME, a finance and risk platform serving **50+** users across **Shell Energy Europe**, handling **1M+** adjustment records monthly and cutting month-end reconciliation effort by **∼25%**.
  - Built **event-driven integration** on **Confluent Kafka**, provisioning topics, schemas, ACLs, and consumer groups and implementing **idempotent** event handlers that **decoupled** backend microservices from external finance systems.
  - Designed versioned **API contracts** with strict request/response validation and **DTO mapping** layers, applying **SOLID principles** as well as **Repository** and **Specification design patterns** to isolate domain logic from persistence and transport concerns.
  - Implemented **transactional Hibernate/JPA persistence** on Azure SQL and enforced fail-closed **OAuth2/OIDC** authentication with **RBAC** authorization across REST endpoints and Kafka consumers.
  - Owned **CI/CD automation (GitHub Actions, Terraform)** for **Dockerized microservices** on Azure Container Apps across **3** environments, **cutting release prep time** by **∼2** hours per cycle and reducing deployment failures.
- **Quriverse** Bengaluru, Onsite
  Founding Engineer *January 2023 - May 2023*
  - Spearheaded development of a **cross-platform mobile application** from scratch using Flutter and **Clean Architecture**, establishing a robust foundation for scalable and maintainable feature growth.
  - Optimized data layer using **caching** and **Isar Database**, and introduced **Bloc** state management for predictable state handling, **reducing API calls** by **30%** and improving application performance.
  - Streamlined **real-time chat** functionality using **Server-Sent Events (SSE)** with robust error handling, increasing user engagement by **20%**.
- **Mindlab Corp.** San Jose, Remote
  Software Engineering Intern *May 2021 - July 2021*
  - Integrated interactive **Rive animations** within the **Flutter-based mobile app**, utilizing **Firebase** for real-time data sync and GetX for state management, resulting in a **40%** boost in app performance.
  - Applied **clean code practices, null safety, and modular design**, contributing to a stable release with **500+** users.

Education

- **Manipal University Jaipur** Jaipur, India
  *Bachelor of Technology - Information Technology; GPA: **9.01*** *July 2019 - June 2023*
  Relevant Courses: *Object Oriented Programming, Data Structures and Algorithms, Operating Systems, Computer Networks, DBMS*

Skills

- **Languages**: Java, Dart, SQL, Python
- **Technologies & Tools**: Spring Boot, Kafka, Redis, MongoDB, AWS DynamoDB, Firebase, Flutter, Azure (Container Apps, SQL DB), Docker, Terraform, GitHub Actions (CI/CD), Postman, SonarQube, Grafana

Projects

- **Crowdlens - Community-Sourced Product Intelligence**:
  - Built a **Spring Boot-based backend** system with **asynchronous job processing (Redis, Rqueue)** using **HTTP 202** & **polling**, enabling scalable handling of long-running AI workflows with average completion times under **1 minute**.
  - Designed end-to-end **data pipelines** integrating **Reddit APIs (OAuth2 + scraper fallback)** with **LLM-based analysis (OpenAI via Spring AI)**, processing **100s** of posts per run to generate structured product insights.
  - Devised production-grade architecture with AWS **DynamoDB caching (TTL, query hashing)**, **SQLite** persistence, and **resilience patterns (rate limiting: Bucket4j, circuit breakers: Resilience4j)** for fault tolerance.
- **Kirana Register - Transaction Management Backend**:
  - Developed **secure backend APIs with JWT-based authentication and role-based authorization**, supporting low latency **transactional workflows** including purchase, refund, and product management.
  - Architected a **polyglot persistence** layer using **PostgreSQL (transaction ledger), MongoDB (product and bill storage), and Redis (caching currency conversion)**, enabling efficient handling of transactional workloads.
  - Implemented **async report generation** using **Kafka** to reduce report wait times; added **observability** using **Prometheus** & **Grafana** along with **structured logging** via **Logback** and **Logstash** for **monitoring** plus debugging.

Achievements

- **Recognized twice at Shell** for delivering production-critical features and resolving high-impact issues, contributing to successful system rollout and operational stability.
- Solved **700+ problems on Leetcode** with consistency.
- Best **Self Care Hack** at Major League Hacking (MLH) **Mental Health Hacks II Hackathon.**
